Exposure Standards have not been allocated to this product.

Exposure standards represent airborne concentrations of individual chemical substances, which, according to current knowledge, should neither impair the health of, nor cause undue discomfort to, nearly all workers.

Except where modified by consideration of excursion limits, exposure standards apply to long term exposure to a substance over an eight-hour day, for a five-day working week, over an entire working life.

Except for short-term exposure limits (STELs), or where a peak value has been assigned, the exposure standards for airborne contaminants are expressed as a time-weighted average (TWA) concentration of that substance over an eight-hour working day, for a five-day working week.
